Precision Trading Volume 3

Saturday, April 26, 2014   12:10 PM

- USD/CHF is the king of volatility when it comes to pairs.
- It is not necessary to have a directional premise 100% of the time.
- 70% of the time the markets are in a trading range.
- In the image below, as the market begins to move outside of the range high, it has a 70% chance of failure to move to new highs and continue on higher. It returns back inside the range.

- You can use order blocks in the opposite direction than your trade for profit objectives.
- The probabilities of trading in the middle of a range are much lower than trading at the extreme's of the range. 90% of your trades should be taken around the extreme sides of the range.
- When we look at price, we want to find out where we are in the trading range.
